RASTER Label

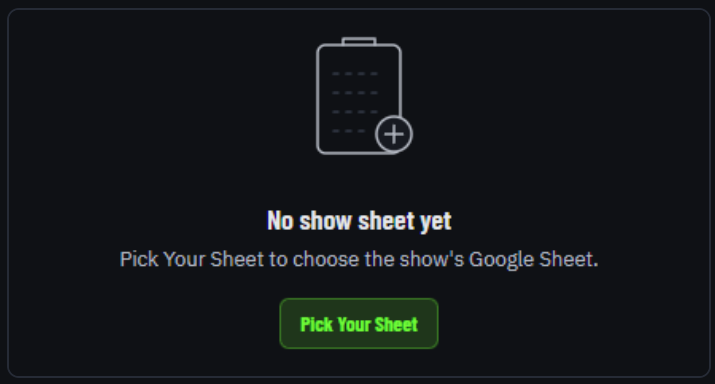

Raster Label: quick reference

Device, case, stek and bundle labels, straight from your show sheet.

QUICK REFERENCE
V0.1.1 · WINDOWS

1 Pick your sheet

Press **Pick Your Sheet**. It signs you in and opens the show's sheet in one go. Next time, it reopens the sheet by itself.

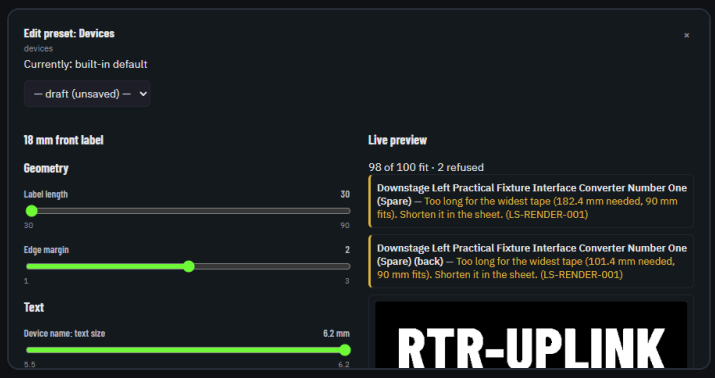

2 Set a preset, once per show

On each tab, **Edit preset →**:

- label length and edge margin;
- each line's text size, alignment, font and nudge.

Watch the live preview, then save.

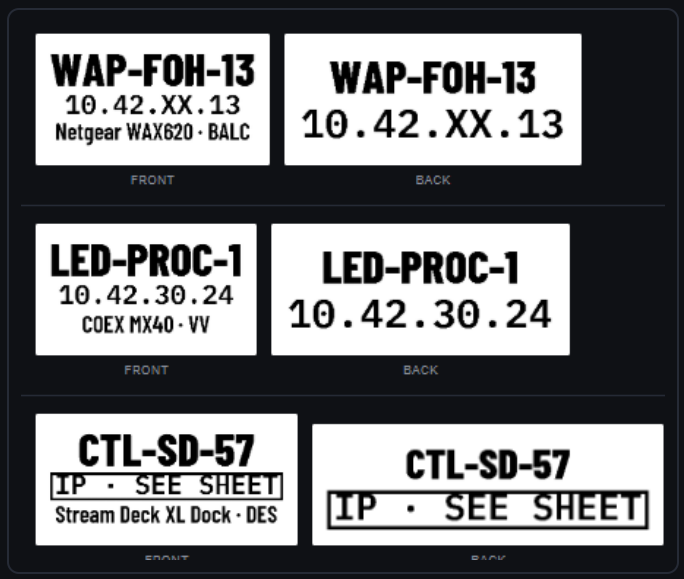

3 Select and save

- Check the labels you want, or use **Select all** or **Only new since last print**.
- Press **Save labels**, then **Open folder** and print the files from there.
- Once your printer has been tested with Raster Label, the button reads **Print selected**.

4 Reading a label

- `10.42.XX.13`: the device is on more than one VLAN.
- **IP · SEE SHEET:** the device has no single IP to print.
- A label that won't fit is refused and listed at the top, never printed wrong.

+ Also here

- **Flow:** devices with no cable in FLOW.
- **Settings:** printers, the gear and cable pull lists, the error log, Log Out.

When something's wrong

Every message ends in a code, like **(LS-SHEET-005)**. Email it to support@rastertech.app, with the log from **Settings → Error log → Open log folder**.
